Polyglot Systems Inc., Contracts with RTI International to Develop a 'Web-Based Application for Family Planning Counseling'

*"Web-based application to consist of counseling guide,
contraceptive decision aid and emergency contraception module"*

Morrisville, NC (March 31, 2011) Polyglot Systems Inc. today announced that they are teaming with RTI International to develop a web-based application for family planning counseling. Under a grant from the Department of Health and Human Services, RTI will assess the application's ability to improve patient-provider communication.

The technology will furnish health care providers with information about women's family planning needs and preferences, which will enable them to focus the counseling they provide on those issues most relevant for each woman. The technology will also provide women with an opportunity to learn about different contraceptive options so that they can make a more informed decision about which method would be best for them.

Polyglot will assist the RTI research team and an expert panel on optimizing the customer experience by providing help with interface design, user experience flow, and content guidelines. Polyglot will also develop the underlying software platform.

"We are extremely excited about this opportunity; both because we will be working with an organization of RTI's stature and because of the nature of the work. Polyglot has dedicated itself to improving communication in healthcare so this sort of project falls squarely within our core competency." said Sims Preston, Polyglot Systems Inc., CEO.
