

Meducation® Now Integrated with EnterpriseRx To Provide Simplified, Multilingual Medication Instructions

Morrisville, NC—April 9, 2015—Polyglot Systems’ flagship solution, Meducation®, is now integrated with EnterpriseRx™, a pharmacy management system developed by McKesson Pharmacy Systems & Automation. Pharmacies that use EnterpriseRx can now access Meducation to provide simplified medication instructions, in multiple languages, with supporting graphics, without interrupting pharmacy workflow.

Meducation is a cloud-based solution that delivers simplified medication instructions for individuals considered to be “high risk” due to low health literacy, impaired vision or language barriers. It enables providers to dynamically create fully personalized patient medication instructions, in over 20 languages — written at a 5th to 8th grade reading level with large font sizes, pictograms and videos — to make understanding how to take medications intuitive and simple.

Simplified medication instructions that are intuitive and engaging have proven to increase medication adherence. Pharmacies that use Meducation are taking critical steps towards reducing hospital readmission rates, improving patient satisfaction, and helping patients adhere to their medication regimes and ultimately improve the quality of their own health.

“The need is severe. One in three Americans are considered low health literate and struggle to understand their often complex medication instructions,” said Polyglot COO Lori McLean. “Approximately fifty percent of patients do not take their medications as prescribed, resulting in staggering, but avoidable, healthcare costs.”

Meducation also has significant impact in helping Medicare Part D plans improve their CMS Star Ratings, as medication adherence is the single most important factor in determining the ratings plans receive. With a three-part aim: better care, healthier people and communities, and lower cost of care, Star Ratings inform beneficiaries about the performance of their plan and determine quality bonus payments paid by CMS. Pharmacies that deploy Meducation serve to support these Medicare Part D payers with programs that improve medication adherence.

About Polyglot Systems

[Polyglot](#) Systems’ award-winning Meducation software was developed under a grant from the National Institutes of Health to address the communication barriers between healthcare providers and their patients. By improving patient understanding, medication adherence and overall patient health are improved, reducing healthcare costs and increasing patient satisfaction. Polyglot’s products have been licensed to hospitals, health systems, clinics and pharmacies.
